

Intelligent Motor Health & Power Monitoring System

Electrical • Thermal • Operational Insight in One Device

Detailed Motor Overview at a Glance

Provides real-time electrical, thermal & operational insights down to the fault level

Real-Time Electrical Metrics including Voltage, Current, Power, Power Factor, Temperature, Load Balance & Quality

Continuously monitors key electrical and thermal parameters to deliver accurate, up-to-the-second insights into motor performance.

Health Score provides immediate insight into overall motor condition.

A single, easy-to-understand score that reflects the combined impact of electrical, thermal, and operational health.

Clear RUNNING Status indicates motor operating normally.

Instantly know when the motor is healthy and operating within safe limits.

Concise, Easy-to-Read Data enables quick assessment & informed decisions.

All critical metrics are presented in a clean, organized layout for fast, confident actions.

Monitor Key Motor Metrics, Health Score & Status in Real-Time

Everything you need. Right when you need it.

Why Use **MotIQ**?

WITHOUT MOTIQ — THE HIDDEN RISKS

- Failures happen without warning
- Costly unplanned downtime
- No visibility into electrical health
- Reactive calendar-based maintenance

VS

WITH MOTIQ — CONTINUOUS INTELLIGENCE

- Early fault detection — weeks before failure
- Plan maintenance on your terms
- 24/7 electrical & thermal monitoring
- Reduce costs & extend asset life

Detailed Motor Overview at a Glance

Provides real-time electrical, thermal & operational insights down to the fault level

Electrical Monitoring

- Current & Voltage
- Power Quality

Thermal Monitoring

- Temperature Trends
- Thermal Protection

Smart Fault Detection

- Detects Looseness, ECC, Misalignment & More
- Uses advanced signal analysis and pattern recognition

Active Fault Alarms

- High confidence detection of a specific fault
- Immediate action recommended

Preventive Insights

- Early signs of developing issues
- Detects subtle changes before faults escalate
- Enables planned, condition-based maintenance

Monitoring Key Motor Metrics, Health Score & Status in Real-Time

Condition Status Analysis & Predictive Insights

✓ Active Condition Awareness

- Displays current active alarm status clearly
- Helps teams recognize when immediate action is required

✓ Confidence-Based Insight

- Shows severity or confidence level for developing conditions
- Helps distinguish advisory states from stronger fault evidence

✓ Predictive Alarm Tracking

- Highlights early developing trends before they become active faults

✓ Alarm History Visibility

- Makes recent condition events easier to review
- Helps maintenance teams track evolving motor behavior

From raw signals to actionable **condition insight**.

Power & Electrical Quality Monitoring

Comprehensive Electrical Measurement

- Voltage and Current monitoring
- Active Power and Power Factor tracking

Load Balance Analysis

- Detects phase imbalance conditions
- Helps prevent overheating and inefficiency

Power Quality Insight

- Identifies abnormal electrical conditions
- Supports stable and efficient motor operation

Continuous Monitoring

- Real-time updates of key electrical parameters
- Enables quick response to changing conditions

Understand your electrical system. Improve efficiency. Protect your motor.

Thermal Monitoring & Hotspot Detection

Real-Time Thermal Visibility

- Continuous monitoring of motor surface temperature
- Detects abnormal heat patterns early

Hotspot Detection

- Identifies localized overheating areas
- Helps detect bearing and insulation issues

Temperature Trending

- Tracks temperature changes over time
- Enables condition-based maintenance

Thermal Protection

- Prevents damage due to overheating
- Supports safer and more reliable operation

Visualize heat. Detect problems early. Prevent failure.

Motor Control & Operational Management

Start / Stop / Auto Control

- Remote motor control capability
- Supports manual and automatic operation modes

Operational Status Visibility

- Clear indication of RUNNING / STOPPED state
- Real-time feedback of motor condition

Protection & Safety Logic

- Prevents unsafe operation under abnormal conditions

Operational Tracking

- Tracks motor run hours and usage
- Supports maintenance planning and lifecycle management

Control with confidence. **Operate safely. Maximize uptime.**

Connectivity & System Integration

Built for Industrial Integration

- Connects easily with control panels and monitoring systems
- Designed for reliable industrial deployment

BMS / PLC / Network Ready

- Supports integration with building and automation systems
- Enables centralized monitoring and supervision

Data Visibility

- Sends key motor health, power, and thermal data where it is needed
- Helps maintenance and operations teams act faster

Scalable Architecture

- Suitable for standalone use or larger connected systems
- Supports multi-motor monitoring strategies

Connect MotiQ to your system. Turn data into action across the facility.

Smarter Motor Monitoring for Reliable Operations

- ✓ One platform for electrical, thermal, and operational insight
- ✓ Detect problems early, make better decisions, reduce downtime
- ✓ Scalable from one motor to many assets

Optimize your motor performance.
Improve reliability. Maximize uptime.

Optimize your motor performance. Improve reliability. Maximize uptime.

Thank You!

Optimize Your Motor Health with MotiQ

MotiQ

MotiQ	Motor Status
Building: Bldg 25	Motor: Motor 6
Run Status	RUNNING
Health Score	100.0%
Current	436 A
Active Power	25.0 kW
Line Frequency	59.5 Hz
Max Temperature	25.3 C
